TECHNICAL SKILLS

Programming Languages: TypeScript (expert), Java, JavaScript, Python, SQL

Backend & Distributed Systems: REST API design, serverless and event-driven architecture, microservices, Node.js, AWS Lambda, API Gateway, SQS, SES, webhooks, Amazon Bedrock

Databases & Storage: DynamoDB (data modeling, capacity scaling, point-in-time recovery), S3, Elasticsearch, relational databases

Frontend & Mobile: React, Next.js, React Native / Expo, Tailwind, Skia, three.js, iOS and Android release (TestFlight, Google Play)

Cloud & Infrastructure: AWS (CDK, CloudFormation, CloudWatch, IAM), infrastructure as code, GitHub Actions, Docker, CI/CD

Other: System design, distributed systems, performance and load testing, observability (metrics, alarms, dashboards), on-call and incident management, experimentation and A/B testing, end-to-end test automation

Languages: Fluent in English and French

WORK EXPERIENCE

Founder & Software Engineer @ Memoir

Paris area, France

June 2026 – Current

- Designed, built and launched a printed photo-album product **solo**: iOS and Android apps (**React Native / Expo**), a **Next.js** web app, **Shopify** checkout and a print pipeline that turns a paid order into a press-ready PDF with no manual step; **40** accounts and **10+** paid orders in the first month after launch.
- Built an **AI arrange engine** on **Amazon Bedrock** that curates hundreds of photos, writes captions and lays out pages against a template library validated with **zod**; the default path for new albums, used on **95%** of ordered books.
- Architected the serverless backend with **AWS CDK (Lambda, DynamoDB, S3, SES)** with dashboards, alarms and runbooks, running the whole product for under **€25/month**; **e2e suites** over the Chrome DevTools Protocol cover **100k lines of TypeScript**.

Software Development Engineer II @ Amazon Prime Video Channels

Atlanta, United States

June 2025 – April 2026

- Relocated to Atlanta to build **internal tooling** behind **thousands of Prime Video Channels subscriptions** worldwide: channel offer pricing, promotion configuration and new-channel launches for business stakeholders, cutting a new-channel launch setup from **1.5 months** to **8 days**.
- Delivered **region-specific partner experiences** such as **GDPR controls** and customer data-sharing controls, designing APIs and controls to meet regional compliance and partner integration needs across **9** marketplaces.
- Refactored the code base and rebuilt the **integration tests**, cutting time to production from **3 days** to **1**.

Software Development Engineer II @ Amazon Prime Video

London, United Kingdom

April 2023 – June 2025

- Led a team of six engineers** across **three countries** to deliver the **ad-free Prime Video subscription** on an accelerated timeline, coordinating engineering, product and partner teams for a launch that began in February 2024 and reached **nine countries** the same year, across **all devices** (TV, phone, web), on a service with **200M+ monthly viewers**.
- Designed and launched the **save offer** to all marketplaces: a cheaper plan offered at cancellation to keep the customer subscribed, alongside other **cancellation-flow** features giving customers alternatives to leaving, retaining **5–20%** of would-be cancellations.
- Improved operational health of the team's services through alarm tuning, runbooks and automated remediation, reducing **on-call** ticket volume by **80%**.
- Mentored and coached engineers** on implementation patterns and code quality during the launch program.

Software Development Engineer @ Amazon Prime Video

London, United Kingdom

July 2021 – April 2023

- Engineer on the **Prime Video library** team, owner of one of Amazon's largest **DynamoDB** tables: the record of every movie and show ever bought or rented by customers worldwide, behind a very high-throughput distributed service.
- In charge of **scaling the service to 11k+ TPS**: designed and ran **load tests**, validated **game-day configuration** (capacity, throttling, alarms) ahead of peak events, and tuned the **Java** services and their AWS infrastructure accordingly.
- Integrated new downstream dependencies and delivered smaller features and fixes across the service; **promoted to SDE II** in April 2023.

Software Development Engineer Intern @ Amazon Prime Video

London, United Kingdom

May 2020 – September 2020

- Built a **centralized search tool** over hundreds of Prime Video channels and offers: an **Elasticsearch** cluster fed by a two-stage aggregation pipeline (AWS CDK), filter APIs by region, pricing and offer type, and a **React** frontend table.
- Expanded searchable attributes from **3 to 15** and **halved load times** with index and query tuning; received a full-time return offer.

EDUCATION

York University

B.Sc. Computer Science (Honours), GPA 3.8 / 4; left in 2021 to join Amazon full-time after the internship

Toronto, Canada

September 2017 – 2021
